Art Unit: 1725

1. The specification is objected to under 35 USC 112, 1st paragraph in that it is written in non-idiomatic expression such that render the meaning vague and indefinite. For example, in page 2, lines 19-30, page 3, lines 7-15, and lines 26-27, page 4, lines 23-31, etc. the meaning is not clear. Also, applicant use "attenuation lines" to describe the configuration of "recesses or grooves". However, the expression of "attenuation lines" is not deemed to be conventional. Applicant is required to correct these and other errors which might occur throughout the specification.

2. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the meaning of "attenuation lines" is not clear. In claim 2, it is not clear what is claimed and also there is a lack of antecedent basis in the specification for the claimed feature. In claim 3, it is not clear what is claimed. Claims 6-9 involve an apparatus claim depending from a method claim. Thus, these claims can be infringed without infringing the base claim from which it depends.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1725

4. Claims 1-9 insofar as definite are rejected under 35 U.S.C. 103(a) as being unpatentable over either Germany 1,508,800 or WO 91/12910 and further in view of Klier et al.

Each of the primary references substantially shows the invention as claimed except the step of reinforcement adding step. However, Klier et al show that it is conventional to add a reinforcement into a molten metal during a composite making process. It would have been obvious to add a reinforcement material into the molten metal of the primary references if a composite article is designated. With respect to claim 3, it would have been obvious to add the reinforcement into molten magnesium if the magnesium metal matrix composite is designated.

5. The patents to Suh, Anderson, Savage, Sugitani, JP 61-193,745, JP 2-108,442 and JP 5-15,963 are cited to further show the state of the art.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kuang Y. Lin whose telephone number is 703-308-2322. The examiner can normally be reached on Monday-Friday, 10:00-6:30,.
